The ASAM Criteria®
Treatment Criteria for Addictive, Substance-related and Co-occurring Conditions

David Mee-Lee, MD
Chief Editor of The ASAM Criteria
Board-certified psychiatrist
ABAM certified

The Six Dimensions of Multidimensional Assessment

The ASAM Criteria structures multidimensional assessment around these six dimensions to provide a common language of holistic, biopsychosocial assessment and treatment across addiction treatment, physical health and mental health services, as well as the spiritual issues relevant in recovery.

Implementing The ASAM Criteria can help you assist patients from assessment through placement and recovery, treat them confidently using expert content supported by feedback from the field and streamline care with the newest addiction science, compatible with DSM-5.

AT A GLANCE: THE SIX DIMENSIONS OF MULTIDIMENSIONAL ASSESSMENT

1. Acute Intoxication and/or Withdrawal Potential
   Exploring an individual’s past and current experiences of substance use and withdrawal

2. Biomedical Conditions and Complications
   Exploring an individual’s health history and current physical condition

3. Emotional, Behavioral or Cognitive Conditions and Complications
   Exploring an individual’s thoughts, emotions and mental health issues

4. Readiness to Change
   Exploring an individual’s readiness and interest in changing

5. Relapse, Continued Use or Continued Problem Potential
   Exploring an individual’s unique relationship with relapse or continued use or problems

6. Recovery/Living Environment
   Exploring an individual’s recovery or living situation and the surrounding people, places, and things
Beginning with the first edition of the American Society of Addiction Medicine’s (ASAM’s) Criteria, certain foundational concepts serve as the basis for all content within The ASAM Criteria:

- Upholding the importance of multidimensional assessments
- Recognizing the need for clinically driven and outcome-driven treatment
- Encouraging variable length of service and a broad and flexible continuum of care
- Identifying adolescent-specific needs, The ASAM Criteria further clarifies the goals of treatment and does not use previous “treatment failure” as an admission prerequisite
- Striving for an interdisciplinary, team approach to care
- Focusing on treatment outcomes
- Engaging with “Informed Consent”
- Clarifying the role of the physician and the term “Medical Necessity”
- Incorporating ASAM’s definition of addiction

Through a strength-based multidimensional assessment, the ASAM Criteria addresses the patient’s needs, obstacles and liabilities, as well as the patient’s strengths, assets, resources and support structure to determine the appropriate level of treatment along the continuum of care.

REFLECTING A CONTINUUM OF CARE

Note:
Within the five broad levels of care (0.5, 1, 2, 3, 4), decimal numbers are used to further express gradations of intensity of services. The decimals listed here represent benchmarks along a continuum, meaning patients can move up or down in terms of intensity without necessarily being placed in a new benchmark level of care.
Co-occurring mental health conditions and substance use disorders are the rule and not the exception. In both adolescents and adults, the line between addiction treatment and mental health treatment is often blurry, and the need for co-occurring enhanced or combined behavioral health programming is great. The ASAM Criteria define the service characteristics needed for co-occurring capable and co-occurring enhanced programs to meet the needs of individuals who present for treatment with co-occurring conditions. The evidence base for co-occurring treatment is more limited for adolescents compared to that for adults, but it is growing. For example, there is mounting evidence that identifying and treating depression in substance-involved youth improves substance use outcomes and vice versa.

“Co-occurring Conditions” and “Co-occurring Disorders” refer to individuals. “Co-occurring Capable” and “Co-occurring Enhanced” refer to types of programs.
Decisional Flow to Match Assessment and Treatment/Placement Assignment

To guide clinical evaluation and discussion, sequentially move through the following decisional flow to match assessment and treatment/placement assignment. If disagreement occurs with another member of the treatment team, a care manager or a utilization reviewer, work through this flow to identify which steps there is clinical agreement on and which steps are in question.

Notice how the tabs within *The ASAM Criteria* correspond to key points along this decisional flow.

**Intake and Assessment**
- WHAT DOES THE PATIENT WANT? WHY NOW?
- DOES THE PATIENT HAVE IMMEDIATE NEEDS DUE TO IMMINENT RISK IN ANY OF THE SIX ASSESSMENT DIMENSIONS?
- CONDUCT MULTIDIMENSIONAL ASSESSMENT
- WHAT ARE THE DSM DIAGNOSES?

**Service Planning and Placement**
- MULTIDIMENSIONAL SEVERITY/LEVEL OF FUNCTION PROFILE
- IDENTIFY WHICH ASSESSMENT DIMENSIONS ARE CURRENTLY MOST IMPORTANT TO DETERMINE TREATMENT PRIORITIES
- CHOOSE A SPECIFIC FOCUS AND TARGET FOR EACH PRIORITY DIMENSION
- WHAT SPECIFIC SERVICES ARE NEEDED FOR EACH DIMENSION?

**Level of Care Placement**
- WHAT “DOSE” OR INTENSITY OF THESE SERVICES IS NEEDED FOR EACH DIMENSION?
- WHERE CAN THESE SERVICES BE PROVIDED, IN THE LEAST INTENSIVE BUT SAFE LEVEL OF CARE OR SITE OF CARE?
- WHAT IS THE PROGRESS OF THE TREATMENT PLAN AND PLACEMENT DECISION; OUTCOMES MEASUREMENT?
Similar to earlier editions, The ASAM Criteria describes treatment as a continuum marked by four broad levels of service and an early intervention level. These levels of care provide the field with a nomenclature for describing the continuum of recovery-oriented addiction services.

<table>
<thead>
<tr>
<th>LEVEL OF WITHDRAWAL MANAGEMENT FOR ADULTS</th>
<th>LEVEL</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ambulatory Withdrawal Management without Extended On-site Monitoring</td>
<td>1-WM</td>
<td>Mild withdrawal with daily or less-than-daily outpatient supervision; likely to complete withdrawal management and continue treatment or recovery</td>
</tr>
<tr>
<td>Ambulatory Withdrawal Management with Extended On-site Monitoring</td>
<td>2-WM</td>
<td>Moderate withdrawal with all-day withdrawal management support and supervision; at night, has supportive family or living situation; likely to complete withdrawal management</td>
</tr>
<tr>
<td>Clinically Managed Residential Withdrawal Management</td>
<td>3.2-WM</td>
<td>Moderate withdrawal, but needs 24-hour support to complete withdrawal management and increase likelihood of continuing treatment or recovery</td>
</tr>
<tr>
<td>Medically Monitored Inpatient Withdrawal Management</td>
<td>3.7-WM</td>
<td>Severe withdrawal and needs 24-hour nursing care and physician visits as necessary; unlikely to complete withdrawal management without medical, nursing monitoring</td>
</tr>
<tr>
<td>Medically Managed Intensive Inpatient Withdrawal Management</td>
<td>4-WM</td>
<td>Severe, unstable withdrawal and needs 24-hour nursing care and daily physician visits to modify withdrawal management regimen and manage medical instability</td>
</tr>
</tbody>
</table>

**NOTE:** There are no unbundled withdrawal management services for adolescents.
## Levels of Care

<table>
<thead>
<tr>
<th>LEVEL OF CARE</th>

ASAM CONTINUUM™ provides a computer guided, structured interview for assessing patients with addictive, substance-related and co-occurring conditions, based on The ASAM Criteria. ASAM CONTINUUM™ and The ASAM Criteria should be used in tandem—the text provides background and guidance for proper use of the software, and the software enables comprehensive, standardized evaluation.

With ASAM CONTINUUM™, clinicians can easily conduct a comprehensive biopsychosocial patient risk and needs assessment along all six ASAM Criteria Dimensions while determining the ASAM Criteria Level of Care recommendation.

ASAM CONTINUUM™ is part of a family of assessment products.

For more information, please visit www.ASAMcontinuum.org.
ASAM has partnered with CARF International (CARF) to launch a national certification program for addiction treatment programs that demonstrate the ability to deliver services consistent with The ASAM Criteria levels of care.

The ASAM level of care certification will initially offer certification standards based on Level 3 of The ASAM Criteria, specifically levels 3.1, 3.5 and 3.7, covering residential treatment programs. Certifications for other levels of care may be developed at a later date.

ASAM and CARF collaborated on the development of proprietary ratable certification elements and scoring methodology, which include certain pass/fail elements that ASAM has determined are essential to an applicant’s certification.

CARF will evaluate programs for certification. To obtain certification, programs will need to demonstrate that they have the capacity to deliver services at the level of care defined by The ASAM Criteria, as represented by satisfaction of the applicable ratable elements in accordance with the scoring methodology. Programs will submit applications to CARF directly, and CARF will independently perform the certification process, including reviewing individual provider applications and conducting site visits. Each certification will be valid for up to three years, at which time the program may reapply.
